

Dear FCC.

As a resident of Southern California, who frequently drives from my home in La Quinta (Palms Springs area) to L.A. find XM Traffic and Weather an significant tool in planning my route into the LA Basin. There is only one AM station in LA that provides this information and frequently from the outlying areas of Riverside and San Bernardino County find this station off the air or delivering such poor reception that you can not listen to it. The Weather broadcast are great for planning trips to other Metropolitan areas while in my car on the way to the airport.

I would request that the FCC continue to allow XM Radio to provide these services.

Sincerely,

Richard W. Jervis, BS, PA-C
PHysician Assistant-Certified.
